Handler

Sheep

Straw bales L **2**

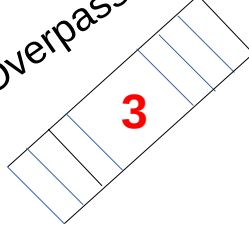

Corridor **8**

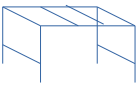

Put away

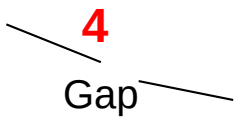

Overpass **3**

Underpass **7**

Gap **4**

Turning marker not in use

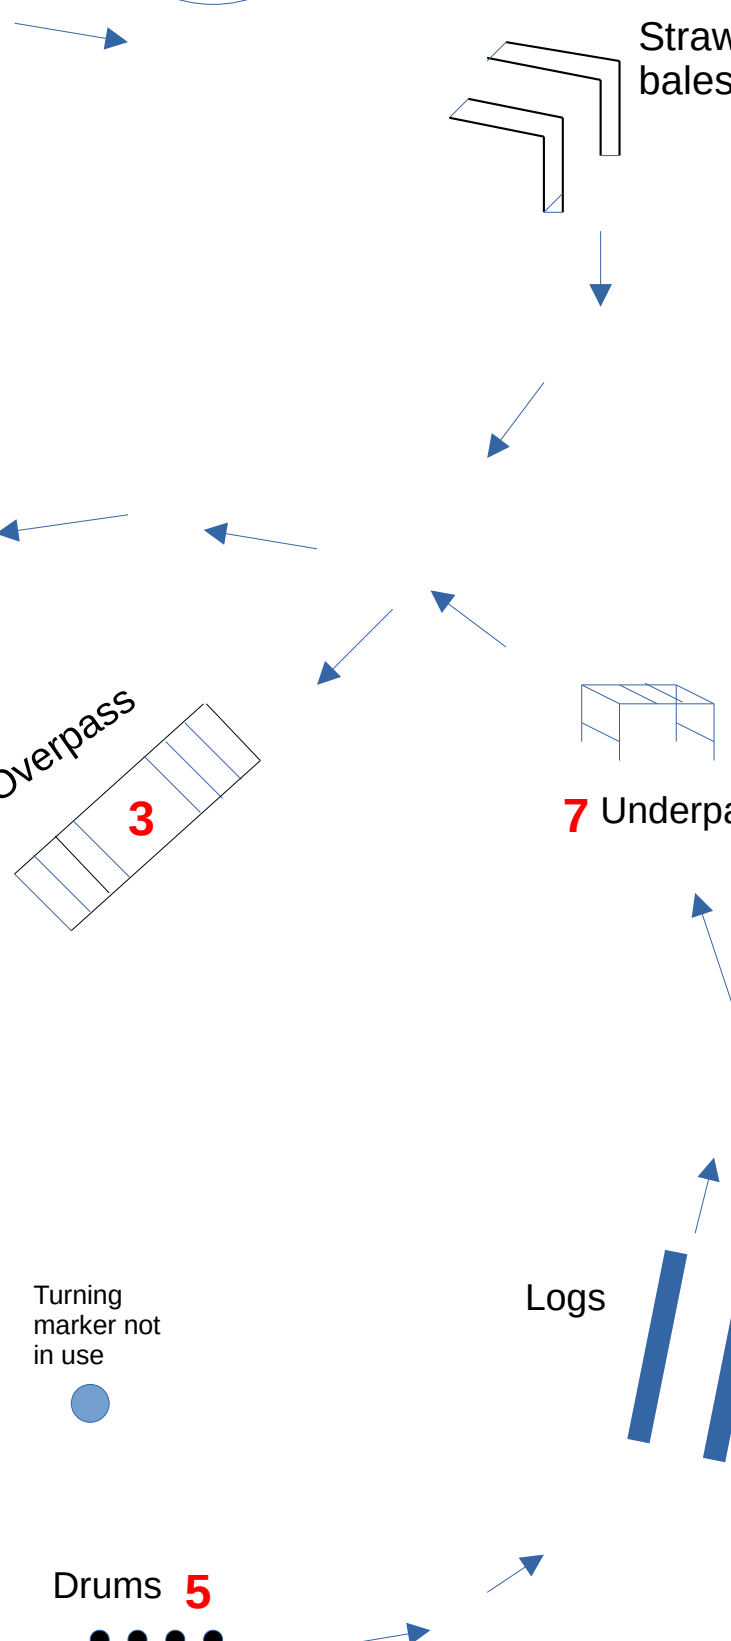

Logs **6**

Drums **5**

Water trough

Advanced Course Information, Stockmans Challenge.

Obviously this is just an example but is close to scale.

For this exercise follow arrows and obstacle numbers.

Time most likely on a course this size would be 12 - 15 minutes.

The course will be marked with obstacle numbers.

Number of sheep possibly 5 or 6.

Handler must not pass the beginning of an obstacle until last sheep has cleared the obstacle except in the corridor.

Start is as per rules issued for each event.

A cast, lift and deliver within the handlers square.

Through the straw bales.

Over the overpass which has an up and down ramp and sides.

Through the gap which is made of 2 old wooden gates.

Through the blue drums which may have wings on the approach.

Sheep to stay between the copper logs which may have wings on the approach.

Through the underpass, this will have railed sides and top approx 2 mt high.

Whilst negotiating the 'corridor' the handler must pick a side to work and remain on that side.

The dog may work the opposite side.

Handler can go behind the entrance to the obstacle but not on the dogs side.

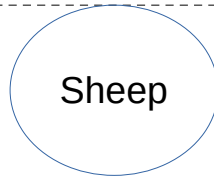

Once all the sheep are in the end pen they can open the gate let the sheep out and once they clear the obstacle proceed to the put away.

Time finishes when put away gate is shut.

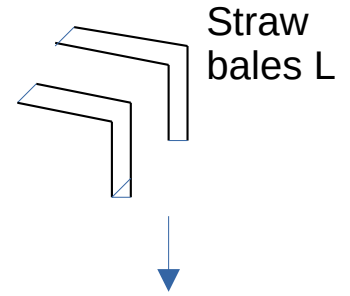

Let out
